CORDASCO
& COMPANY, PC

"I leveraged Virtual Office CS instead of building an infrastructure from scratch."

"In order for us to be successful and grow our business we need to stop thinking inward and with a do-it-yourself mentality."

THE DECISION

"Why wouldn't I choose Virtual Office CS? I reduced my overhead costs, I enjoy accessibility to the applications from anywhere, I can maintain a mail server at a reasonable cost, and I have the security of reliable back-ups and redundancy."

THE TIMING

"Experience at other firms taught me that spending the money to 'do it right' up front was well worth the investment. So when we started our practice in February 2007, I leveraged Virtual Office CS instead of building an infrastructure from scratch."

THE SAVINGS AND BENEFITS

The Primary Benefit is Portability
"Virtual Office CS allows us to create a culture that supports the work/life balance that is demanded by new staff."

Time, Money and Sleep
"I never have that, 'I need to safeguard my systems now' panic attack at the last moment when a hurricane is coming.

"Tools such as Virtual Office CS allow us to spend less time and money on administrative functions and more on what's important—clients and staff."
