

# ENHANCING THE BUSINESS

## *How Evenhouse & Co, P.C. streamlined client payroll with myPay Solutions*

Since 1964, **Evenhouse & Co, P.C.** has been serving clients out of Elmhurst, Illinois. The firm operates with 15 team members and is a full-service accounting firm serving 350 business clients and close to 1,500 personal tax clients.

With so many clients, Partner Tim Vande Werken attributes the firm's success and longevity to their family-like client relationships. They recognize the need to provide the best client service possible. As a result, Vande Werken and his team began to rethink some of their processes to see how they could improve, which led them to partnering with myPay Solutions.

"Prior to using myPay Solutions for payroll processing, we kind of had a mix of payroll. It wasn't efficient and it wasn't working as well as we needed it to."

Evenhouse & Co, P.C. has been a customer of Thomson Reuters since 1999, which is why they considered myPay Solutions for help and eventually transitioned their payroll clients to the service.

"What we've been trying to do is get on a streamlined payroll processing platform that will let us gain efficiencies, but not have to spend too much time on it. For us, myPay Solutions has been a nice solution for us."

After using the service for a year and a half, Vande Werken discovered an additional benefit for this firm.

"The biggest benefit was that we were able to eliminate a lot of the payroll problems that we had. Now if there's a problem, we contact our myPay Solutions rep and it's done."

The firm also found that the myPay Solutions service helped them free up administrative time to focus on other business areas—eliminating extra oversight or management.

With myPay Solutions, firms like Evenhouse & Co, P.C. are able to integrate detailed payroll journal entries from their clients' payroll that seamlessly flows into Accounting CS® or Write-Up CS® software.

"I think the biggest reason that we've added a lot of Thomson Reuters products has to do with the integration between products. It makes it a lot easier to have the different pieces of software communicate with each other."
