

SONYA L. LANEY, CPA, PA

"Data integrity is very important today. I don't regret, even for a second, investing in Virtual Office CS."

"I cannot afford to risk sensitive client data to a local computer tech and a security system on my doors and windows."

THE DECISION

"I chose Virtual Office CS to ensure all of my data was secure and that—under no circumstances—could a computer issue, virus, impropriety, or weather issue jeopardize my business or my ability to work."

THE TIMING

"I embraced the virtual office environment in my first year of operations, as we were just entering the market."

THE SAVINGS AND BENEFITS

Accessibility

"When at a client's office, I still have access to all my own files. Everything I need to answer client questions during a meeting is on my laptop. I can do it in a matter of minutes."

Security

"I am able to work from my office, home, or a client's office. As long as there is a high-speed Internet connection available, I can work."

"Data integrity is very important today. I don't regret, even for a second, investing in Virtual Office CS. I understand that 'virtual' does not mean loss of control."
